## Who it can help

*Motto: desire / need BREATHE FREELY*

[RESPIRATION; deep; desire to breathe]

It means to get rid of feeling of SUFFOCATION/oppression

of respiratory problems such as cough, irritated airways, chest pain and other symptoms of the respiratory tract,

especially those that restrict free breathing, oxygen/CO2 exchange or breathing in both directions, in and out.

Emphasis is placed on the inhalation phase and the possibility to BREATHE IN FREELY.

In the broader sense, FREEDOM to breathe and the FREEDÔM to live according to your (own/not others') will, impulses and decisions, (inside) a PROTECTED but INTER-CONNECTED LIFE SPACE.

body, although individuals who are affected with pulmonary diseases, more particularly tuberculous individuals, are most liable to its visitations. The most extensive influenza-epidemics have spread from east to west. We again call attention to the connection between influenza and the amount of ozone in the atmosphere.

*Symptoms.* If latterly every bronchial catarrh with typhoid symptoms has been designated as influenza, this appellation is no more proper than it is proper to refuse this name to larger or smaller epidemics for no better reason than because they do not come up either in extent or fatality to the epidemic of 1833. We apply the
